PREFACE

THIS fourth edition of "Population and Its Distribution" provides a compilation of population figures and others, specifically for use in sales and advertising work.

In Part I of this issue we present figures for 1925 in columns parallel with those for the latest actual count figures (1920). The figures for those states which have taken a state census for 1925, and have made public the results, are used as the new figures for those states; for all the other states and larger cities we have used the Federal Census estimates for 1925.

In Part II, the 1925 figures for population of cities have been brought together by size groups under state headings. These new figures are accompanied by corresponding figures for 1920, for comparison.

One new feature of this edition is the extension of population and income tax figures to counties, as presented in Part III. This makes it possible to work out sales quotas on the basis of population per income tax per county as well as on a state or regional basis.

Another new feature is the grouping (Part IV) of the county figures into 679 retail shopping areas, in such a way as to represent fairly well-knit territories tributary to those cities in which are made most of the consumers' purchases of such articles as call for a comparison of offerings before purchase. These areas, of course, are suggestive merely and are not to be regarded as arbitrary or fixed units. In each case the component parts have been indicated so that anyone may readjust boundaries to suit his own needs. We believe, however, that such a grouping as this, worked out by any manufacturer to meet his own needs (and especially a grouping based on a painstaking study of local markets such as we have endeavored to present) will give a more accurate and useful picture of his market than any similar compilation of figures worked out on the basis of political units only.

As in the previous editions of this book, we present in Part V a listing of wholesale and retail dealers in certain lines of trade. These listings have been prepared expressly for this book and have been checked and corrected with great care. No listing of this kind can be an adequate substitute for an official census. But until such a census is taken these listings will be found useful.

Each of the five parts of this volume is preceded by an introductory statement which explains fully whatever seems to need explanation in that part.

J. WALTER THOMPSON COMPANY

CONTENTS

PART I 1

Population of the United States, by States and by principal cities for 1925, estimated by the Bureau of the Census of the United States—Supplemented by State Census figures for 1925 in all states for which such figures are available—Figures for 1920 for comparison.

PART II 7

State summaries of population by city size groups and kindred state totals for 1920—Followed by 1925 estimates for cities, by city size groups, and detailed lists of the principal cities grouped by size (1925).

PART III 109

State and county figures for number of Federal income tax returns (1922) compared with population (1920) and the population per income tax return for each county in the United States—Summaries for "preferred" counties and "remaining" counties by states—Maps showing number of income tax returns by counties.

PART IV 211

Retail shopping areas—Figures from Part III grouped into 679 retail shopping areas, showing population and tax returns for 679 centers and surrounding territory, with the number of department stores in these areas.

PART V 305

Distributers—wholesale and retail in principal lines of trade. A specially prepared count of the number of wholesale and retail concerns in various lines of trade for states and for all cities having an estimated population of over 25,000 in 1925.

APPENDIX A 357

A tabulation of population by city size groups, and by town size groups (for rural and small town places), according to the Census of 1920.

APPENDIX B 364

Percentages of United States totals by states for fourteen items commonly used in preparing sales quotas—United States and state totals for same items.

APPENDIX C 370

Suggestions as to sources of basic data for use in market analysis work.

POPULATION AND ITS DISTRIBUTION

{Fourth Edition}

First Edition, 1912
Second Edition, 1918
Third Edition, 1921
Fourth Edition, 1926

GENERAL INTRODUCTION

FOURTEEN years ago, in the first edition of "Population and Its Distribution", we brought together certain basic market data in convenient form for use by sales managers and advertising men. Since then two other editions have reflected the progress being made in the use of facts as the basis for marketing plans.

This Fourth Edition comes at a time when the demand for market analysis material has become more urgent than could have been foreseen even a few years ago; and when there is reason to expect that constructive action leading to a trade census will be taken soon.

There is widespread discussion of the necessity for more statistical data to serve as a basis for market study, and such data are needed. But new statistical material of this character must be built firmly on our existing statistical foundations; and it is well in this connection to remember that the present Federal Bureau of the Census already is the largest statistical organization in the world and that it is only one of many bodies now preparing statistics useful in the conduct of business.

The Census of the United States is an aristocrat among our government institutions. It goes back to the Constitution itself. The first population count was made in 1790 to serve as the basis for determining the makeup of the House of Representatives; and the Constitution provides for its repetition every ten years. This is said to have been the first periodic, regular count of its population ever provided for by any country. The first census reported a population of 3,929,214,—somewhat less than the present population of Brooklyn and Manhattan. This area of the original United States now shows a population of over 45 million.

The work of gathering census figures has taken on new phases from time to time (notable among them being the collection of many kinds of figures covering manufactures) until now the Bureau of the Census, instead of being a temporary bureau scraped together every ten years for a few months of activity, is one of the large branches of the Federal government. The regular office force numbers over 700 and the field agents over 700 more, while during a decennial census the Washington office force is increased to 6,000 and more than 87,000 enumerators are employed.

Moreover, these Census Bureau activities now are supplemented by kindred statistics, bearing on general market problems, collected by no less than 23 other government bureaus. In addition to this equipment of the Federal Government, most of the states have highly organized bureaus, and nearly every industry and trade collects authoritative, although unofficial, figures covering its field.

The actual count of population still comes only every ten years, but the Bureau of the Census now issues every year an estimate of growth calculated on a formula which projects for each state and each important city the amount of growth for the preceding years, and at intervals, also, for counties. All of these estimates are subject to more and more correction as the base year figures fall farther behind the year covered by the estimate.

The census figures as now provided, showing age groupings, sex, racial characteristics, the family and household figures and the urban and rural changes, give us means for measuring the values of markets such as did not exist even a generation ago.

Thus, we have made marked progress toward getting our ideas of production and consumption on a firm factual basis. The next great need is for more facts about how the gap between production and consumption is bridged.

Recently it has been announced that Secretary of Commerce Hoover and officials of the National Distribution Conference are considering plans for including, in the census of manufacturers for 1927, one or two distribution schedules. These figures are expected to be useful in determining whether a complete census of distribution should be undertaken, perhaps in connection with the census of 1930; and, if so, how much ground it should attempt to cover, and what form it should assume.

PART I

POPULATION *of* STATES *and* PRINCIPAL CITIES

1925-1920

PART I

Population of States and Principal Cities 1925-1920

IF the population of the United States has grown during the years since the census of 1920 at anything like the rate for previous years, the gain has been close to 8,000,000. This is nearly as great an increase as if two new states as large as Illinois and Indiana respectively had been annexed. We need some idea as to where these new people have been added and how their addition affects sales plans, quotas and sales records.

It will be five years before the next general census is taken and by that time the discrepancy in comparison with 1920 figures will be more than twice as great as it now is. In a few of the states a quinquennial census was taken in 1925, and for most of these the main figures now are available—notably Massachusetts, Rhode Island, New York, Florida, Iowa and Kansas. For the remaining 42 states the best figures to be had for 1925 are those of the Federal Census Bureau estimate taken as of July 1, 1925. In the case of a few cities where the rate of growth has shown some obvious irregularity a special census has been taken by local authorities under the supervision of Federal census officials. But most of the figures here given for states and cities are those of the 1925 estimate.

The Bureau of the Census makes the following statement concerning the methods of estimating by which these figures are arrived at:

"The method of arithmetical progression was adopted for computing the estimate of population. It is the simplest and it has been shown by experience to come nearer in accuracy, in the majority of cases, than any other formula. It is based on the assumption that the increase each year since the enumeration is equal to the annual increase from 1910 to 1920.

"In bulletins prior to that published in 1917, when the censuses were taken exactly 10 years apart, the annual increase was assumed to be equal to one-tenth of the decennial increase, but, as the time of taking the enumeration in 1920 was changed from April 15th to January 1st, the time elapsed has been considered as 116.5 months. The annual increase from 1910 to 1920 is obtained by dividing the total increase by 116.5 and multiplying the quotient by 12, allowance being made for the population of any annexations and detachments of territory that may have been made since April 15, 1910, of which the Census Bureau is advised.

"As the statistical data are collected for the calendar year, in computing the rates and averages the mid-year population must be used; consequently, the date of the estimates was fixed as July 1st, considering this the mid-year.

"Where the census returns of 1920 show that a state, county, or city has decreased in population since 1910, no estimate showing a continual decrease is made, but, in lieu of an estimate, the population returned at the census of 1920 is used. Also where it is evident that a city has not increased since 1920 as rapidly as from 1910 to 1920, on account of war conditions and the increase in certain industries which have since been greatly retarded, the bureau uses the 1920 population in lieu of an estimate. In order to treat all cities fairly, before using the 1920 population in lieu of an estimate showing a large increase, the estimate is checked by an alternative method, which is based on the birth rate for previous years."

POPULATION IN 1925 AND 1920 OF THE STATES IN THE UNITED STATES

The 1925 figures shown are, except where otherwise noted, estimates of population, as of July 1, 1925, made by the Bureau of the Census. State census figures are used where available. Where figures from neither of these sources are obtainable, the best estimates which could be found are used.

[a] State Census figures, 1925

[b] Special Census under Federal Supervision

PART II

CITY POPULATION *by* SIZE GROUPS
ARRANGED *by* STATES

PART II

City Population by Size Groups
Arranged by States

IN this part we have brought together the new figures for population of cities, in 1925, by size groups under state headings.

These figures are accompanied by certain state totals for 1920 which will be found useful for comparison and will serve to give an idea of rates of growth in various parts of the country.

The Federal Census Bureau estimates for 1925 and the available state census figures are the same as those used in Part I. The groupings and the resulting calculations are ours.

The figures for the number of families in each state have been arrived at by applying to the estimated state population figure for 1925 the figure for the number of persons per family in that state shown by the census of 1920. The figures for number of farms in each state are from the agricultural census of 1925.

ALABAMA (1925)

Estimates of population, as of July 1, 1925, made by the Bureau of the Census

Population.....2,467,190
Percent of increase over 1920....5.07
Number of families.....536,345 (estimated)
Number of farms 1925.....237,564

Cities of	Number of cities	Population
100,000 and over	1	205,670
50,000 — 100,000	1	65,955
25,000 — 50,000	1	46,481
15,000 — 25,000	4	79,097
10,000 — 15,000	3	40,251
Total in cities of over 10,000	10	437,454

PART III

POPULATION *and* FEDERAL INCOME TAX RETURNS
by COUNTIES
ARRANGED *by* STATES

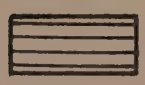
KEY TO CROSS-HATCHINGS

The cross-hatching patterns used in Parts III and IV are in conformity with the system of standard arrangements of such patterns suggested by Committee III of the National Distribution Conference of 1925. The key is as follows:

— over 100,000 Federal Income Tax Returns, 1922.

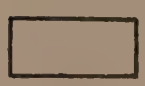
— 50,000 to 100,000

— 10,000 to 50,000



— 1,000 to 10,000

— 500 to 1,000



— less than 500

These patterns are the long-accepted designs used in heraldry to indicate respectively red, yellow, green, blue, purple and white. The idea underlying the Conference plan is that in graphic presentation of facts, these colors and their corresponding black and white patterns should be used always in the same order beginning with red for the highest and continuing purple for the lowest, solid black and white lying beyond these respectively. The order for the colors thus suggested is that for the solar spectrum, which always remains unchanged.

These color symbols are similar to those prescribed by the United States Patent Office for use in drawings.

PART III

Population and Federal Income Tax Returns by Counties—Arranged by States

THE figures in this section of this book are designed to be helpful to anyone laying out a sales quota for an article the price of which constitutes a basis for sales resistance.

One need at the present time is for a method for measuring population which will supplement the mere numbers by some indication of buying power. Thus far no satisfactory single measure of this phase of market study has been devised; but the number of Federal Income tax returns, and the relation of these to population, come nearer to furnishing such a measure than has any other single standard in use. These figures for the number of tax returns have the advantage of giving us for the first time an enumeration of taxable incomes of $1,000 or over. Their chief defects grow out of the fact that some effective buying units exist below this income level, that several of these incomes (particularly in the lower levels) may be grouped in a single family buying unit, and that (particularly in farming regions) many effective incomes above this limit are not in taxable form. And yet, with all its defects, the index of buying power furnished by the number of people per income tax return in any given area is more satisfactory than most of the more complex index numbers which have been developed.

For each county in the country the population for 1920 is shown. These are the latest actual count figures available for such small population units as counties. Parallel with them are shown the number of Federal Income tax returns reported for the year 1922. From these figures is worked out the number of people in the county for every income tax return—in other words the number of people for every taxable personal income of over $1,000. The tax figures for 1922 were taken instead of those for 1920 or 1921 because they were more detailed, and that year was chosen rather than 1923 because it seemed wise to get not farther than two years from the population base figure.

The arrangement here followed makes it possible, when such a course is desirable, to drop from consideration in sales plans all counties having less than a given population and over a specified income tax ratio. There are, for instance, in the state of Missouri, 115 counties, but over 90 per cent of the taxable incomes are in 23 of these. By sifting out the less populous counties and those with the higher ratios of population to income tax returns it would be possible to divide the state so that the most vigorous sales effort would be devoted to the best territory, and the lean counties not given more than their due share of attention.

The counties in each state reporting 500 or more Federal income tax returns have been set in distinctive type; and the summary of these in each state (indicated as "preferred" counties) will be found a convenient aid in mapping out sales plans. Returns reported under the heading "Miscellaneous" and not assigned to any county have been eliminated from consideration in all cases.

† Information not available

[a] What is now Kenedy County was formed before 1920 under the name of Willacy County. In 1921 the name was changed to Kenedy County and a new Willacy County was formed from parts of Cameron, Hidalgo and a small strip of Kenedy. The census of 1920 gives a population of 1,033 for what was then called Willacy County (now Kenedy). The tax returns for Willacy County in 1922 numbered 12. None were reported for Kenedy County.

Income Tax Returns designated as miscellaneous, and not assigned to counties, omitted in all tabulations and calculations in Part III of this book

PART IV

A GROUPING *of* COUNTIES AROUND CITIES *to* FORM RETAIL SHOPPING AREAS

PART IV

A Grouping of Counties Around Cities to Form Retail Shopping Areas

PRACTICALLY all statistics useful in market study necessarily are collected in political units—cities, counties or states—whereas trade, in actual process, gives little or no heed to the boundaries of these units. Sales in a city flow freely into suburbs and surrounding country; county lines are purely imaginary and almost negligible in trade; and, with free-trade between the states guaranteed by the Constitution, state boundaries are little more than a granite block by the roadside, or the place when the road surface changes from asphalt to concrete, or a sign in the middle of the bridge.

What really count are the trading areas tributary to trading centers. But these, it is clear, cannot be identical for all lines of trade. For example, one recent drug directory shows drug-jobbing houses located in 205 cities, while a similar directory of the grocery business reports substantial concerns located in 567 centers. Clearly, if the whole country is covered from these centers, the areas reached by drug jobbing centers must be larger, as a rule, than those reached by grocery jobbing centers. Similarly, the areas within retail shopping radius of the larger department stores of the country, even though they reached beyond the city limits, would, as a rule, be smaller than grocery jobbing areas.

In the following pages we have made a grouping of the foregoing figures for cities and counties indicating one of the ways in which these figures, gathered in political units, are capable of being used in interpreting commercial data.

In preparing these groupings we first located, on a map, all the department stores of substantial size in the United States reported in any one or more of three directories of that trade. After determining the financial rating of the stores thus located, we then grouped about all these cities and towns, where the more important stores were located, all or parts of the surrounding counties which were more accessible to each of these points than to any other city. In this way we established 680 trading areas, each composed of a trading center and of a group of counties or parts of counties tributary thereto. These may be regarded as the retail shopping areas from which the located stores draw their out-of-town trade; and the population of these areas is the part of the total population served by the retail outlets for "shopping" goods in these cities.

In this manner all the population of the United States has been assigned to one of the 679 important cities or towns in which large department stores can and do operate. In 632 additional cases, cities of considerable size which are situated near these larger centers have been assigned to the larger city as a sub-center and not set up as the center of a separate trading area. In each of these cases, however, the figures for the city and the surrounding counties are shown and can be separated readily from the larger city total, if desired.

In a few cases, where a comparatively small city was found to be the center of an area which was not easily accessible to a larger place, it has been given a degree of importance, as a separate center, not wholly justified by its size alone.

For each area we have shown the total population, the number of Federal income tax returns, the number of people per income tax return and the number of important department stores.

This arrangement is purely by way of suggestion, and we assume that anybody will be able to take individual groupings and point out opportunities for betterment. It is not our thought that these areas constitute hard and fast groupings with clearly traced boundaries, but that they will serve as a suggested set of commercial areas which, for the kind of goods in question ("shopping" goods, or those in the purchasing of which the consumer compares offerings before buying), are fairly well defined.

Frequently these areas cross state lines, but in each instance we have assigned the whole area to the state in which the center is situated.

The population figures used in this table are those for the Census of 1920, as these are the latest in which county data and those for the smaller towns and villages are available. The income tax figures are those for 1922, as it was thought desirable that they should be not too far removed in point of time from the date of the population figures to which they were related.

The department store figures in the first column are those for cities of over 25,000 from Part IV of this book, and from current trade directories for smaller places. Those in the second column are for stores of largest size and widest apparent sales radius, selected from the trade directory figures.

In the main the trading areas thus set up cover entire counties, although in a few instances a division of the county seemed unavoidable. Generally speaking, it was assumed that, even where a portion of a county was more accessible to an outside center, the customers who were drawn from nearby regions in other directions would approximately compensate. An illustration is to be found in the area between Battle Creek and Jackson, Michigan. A portion of Calhoun County (in which Battle Creek is located) which lies near the eastern boundary of the county certainly is nearer Jackson than Battle Creek. But, when say one-fifth of Calhoun County has been taken from Battle Creek and given to Jackson and the necessary additions to Battle Creek have been made from Kalamazoo County to the west and others nearby, and when Jackson County in turn has lost a portion of its territory to Lansing and perhaps to Ann Arbor, the final totals for both trading areas turn out to be so near the straight county totals that it seems simpler, and almost as accurate, to conform to county lines and assume that the giving-to and taking-from nearby areas would offset each other. In a few instances, where there was no compensating interchange, the county has been divided between two or more centers.

The areas thus established as retail shopping areas may be used for quota figures or for sales figures for goods sold largely to department stores direct, or for those sold to other types of retail outlet having a sales radius similar to that of the "shopping" lines of department stores. Musical instruments, rugs and furniture, heavy hardware, household equipment or high priced clothing would be the types of goods to which this grouping of trading areas could be applied.

For grocery lines, areas based on grocery jobbing centers, but constructed by grouping counties about centers on the same principle as that here used, give a more accurate picture of conditions. In his last annual report the Secretary of Commerce announced the forthcoming publication of such a grouping of the country about grocery jobbing centers. That publication is in line with this same idea.

In the following tables each sub-center is indented under the main center to which it is tributary. The total figures for each area include the figures for the center, all sub-centers in the area, and all outlying parts of the area indicated by the names of counties.

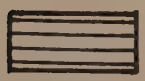
KEY TO CROSS-HATCHINGS

The cross-hatching patterns used in Parts III and IV are in conformity with the system of standard arrangements of such patterns suggested by Committee III of the National Distribution Conference of 1925. The key is as follows:

— over 100,000 Federal Income Tax Returns, 1922.

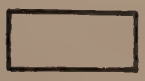
— 50,000 to 100,000

— 10,000 to 50,000



— 1,000 to 10,000

— 500 to 1,000



— less than 500

These patterns are the long-accepted designs used in heraldry to indicate respectively red, yellow, green, blue, purple and white. The idea underlying the Conference plan is that in graphic presentation of facts, these colors and their corresponding black and white patterns should be used always in the same order beginning with red for the highest and continuing purple for the lowest, solid black and white lying beyond these respectively. The order for the colors thus suggested is that for the solar spectrum, which always remains unchanged.

These color symbols are similar to those prescribed by the United States Patent Office for use in drawings.

[a] What is now Kenedy County was formed before 1920 under the name of Willacy County. In 1921 the name was changed to Kenedy County and a new Willacy County was formed from parts of Cameron, Hidalgo and a small strip of Kenedy. The census of 1920 gives a population of 1033 for what was then called Willacy County (now Kenedy). The tax returns for Willacy County in 1922 numbered 12. None were reported for Kenedy County.

PART V

WHOLESALE *and* RETAIL DISTRIBUTERS *in* SELECTED TRADES

PART V

Retail and Wholesale Distributers in Selected Trades

FOR all those who construct marketing plans, or who try to interpret sales records intelligently, there is no more disconcerting gap in the supply of basic data than that due to the absence of official figures for the channels of distribution.

The lack of generally accepted definitions for even the principal trades is, of course, only one of the troublesome phases of the absence of census statistics in this field. The term "grocery store," for instance, may range in meaning all the way from an Armenian pop-stand with a glass or two of pickles on the shelf to a highly departmentized grocery combined with fruit and vegetable, meat and bakery shops. Or again, a village general store may call itself a "department store" while a highly departmentized shop for ready-to-wear clothing may refuse to be classed as one because it sells no piece goods.

Before it is possible to formulate trade figures which can be accepted as even passably accurate and used with confidence, there must be both an agreement on definitions and the adoption of systematic methods of enumeration. In time, these will need to be worked out by the Bureau of the Census or some other Federal Government body, as has been done in the case of the other divisions of the census. But, pending this official undertaking, dependence must be placed on the best available private sources.

For this publication we have had made for us by the R. L. Polk Company—publishers of most of the city directories compiled in this country—a careful count of wholesale and retail stores by states, and for all cities having more than 25,000 inhabitants according to the Federal estimates of population as of July 1, 1925. This count, which was specially made for this book, was based on specific definitions of each trade, as follows:

Definitions of Trades used in the Preparation of Part V

Automobile supply dealers, retail*

Includes automobile accessory and supply dealers, and those automobile dealers who handle accessories and supplies on a considerable scale. Does not include garages or repair shops which only handle supplies on a small scale.

Automobile supply dealers, wholesale

Covers the regular wholesalers of automobile supplies and also automobile accessory and supply jobbers.

Automobile garages*

Includes only regular garages. Automobile laundries, repair and service stations are not included.

Automobile repair shops*

Includes regular repair shops and all automotive trade concerns having a bona fide repair department. Automobile repairing and service stations also are covered.

Boot and shoe stores, retail

Covers the regular boot and shoe retail stores, but does not include clothing, department stores or general stores handling shoes, except in those cases where the shoe retailing organization is a separate business, and not merely a department of a larger store. If, for example, a man owns a shoe department of a large department store and has a separate rating, he is separately listed under his line.

Boot and shoe dealers, wholesale

Includes the regular wholesalers of boots and shoes, and those manufacturers' branches where a wholesale business is carried on.

Cigars, cigarettes and tobacco, retail

Retail cigar and tobacco stores are included; but cigar stands in hotels, drug stores and similar places are only counted where they are operated as a separate business. They are not counted when operated as a part of the hotel or store.

*If a dealer also has a garage and does repairing, as well as selling accessories, he is listed under all three headings, Automobile Supply Dealers, Automobile Garage, and Automobile Repair Shops, provided each of these lines is of sufficient importance to justify directory listing.

Cigar, cigarettes and tobacco, wholesale

Includes only the regular wholesalers of those products and such concerns as are engaged in manufacturing and in wholesaling their own products. These figures do not include wholesale grocers carrying tobacco lines as an incidental part of their business.

Confectionery, retail

Covers regular confectionery stores.

Confectionery, wholesale

Includes only wholesale confectionery, and does not include wholesale groceries or others carrying confectionery as an incidental part of their business.

Department stores

Includes (1) all concerns listed as department stores in directories, credit rating books or other accepted trade sources.

(2) a few large general stores in places of considerable size, dealing in dry goods, house furnishings and clothing lines, and organized on a distinct departmental basis.

(3) Some of the larger general stores selling within a specified price range (25¢ to $1.00 and a very few of the largest 5¢ and 10¢ stores) so situated as to justify our ranking them as a department store in at least the notion and sundry lines.

Drugs, retail

Includes only retail drug stores so classified in the directories. Chain drug stores are included.

Drugs, wholesale

Includes only regular wholesale druggists so classified in the directories.

Dry goods, retail

Includes only concerns listed as Dry Goods, Retail. In this classification there was no analysis of departments, but reliance has been put entirely on the classification in standard directory and rating sources. Stores handling children's and misses' ready-to wear clothing only are not included in this dry goods classification. In view of the overlapping of definitions there probably is some duplication of count between the larger of these dry goods stores and some of the smaller department stores. This duplication is not in excess of 5% of the number of dry goods stores.

Dry goods and allied lines, wholesale

Includes wholesale houses handling dry goods, cotton goods, knit goods, millinery, notions and kindred lines. In this classification have also been included jobbers of men's and women's ready-to-wear clothing.

Electrical supplies, retail

Includes electrical supply dealers so classified in directories, and electrical contractors handling electrical supplies. Public Service Corporations retailing electrical supplies also are included. Electrical supply departments of department stores are not included, except where operated as separate establishments.

Electrical supplies, wholesale

Regular wholesale electrical supply stores so classified in the directories.

Furniture dealers, retail

Includes regular retail furniture stores, both new and second-hand, so classified in the directory. Furniture departments of department stores are not included except where operated as separate establishments. Furniture finishers are not included.

Furniture dealers, wholesale

Includes wholesale furniture stores so classified in the directories, and manufacturers of furniture who also do a wholesale business.

General stores

Includes only the regular general stores so classified in the directories, handling a miscellaneous line of merchandise.

Groceries and delicatessen shops

Includes groceries, retail, and delicatessen shops, so classified in the directories, but does not include general stores handling groceries, nor does it include grocery departments of department stores, except where they are separately organized and operated. Chain grocery stores are included.

Groceries, wholesale

Includes only regular wholesale grocers, so classified in the directories, and does not include brokers or special wholesalers handling only a limited line of two or three food products.

Hardware, dealers, retail

Includes only hardware dealers so classified in the directories.

Hardware dealers, wholesale

Includes only regular wholesale hardware dealers, so classified in the directories.

Jewelers, retail

Covers regular retail jewelers' stores so listed in the directories, but does not include such concerns as Gorham's in New York, which are principally silversmiths, nor does it include exclusive diamond and precious stone dealers. Jewelry departments of department stores are only included when they are separately organized and operated, and are so listed. Small neighborhood stores handling jewelry as a substantial part of their line have been included.

Jewelers, wholesale

Includes only regular wholesale jewelers so specified in the directories.

Lumber, retail

Includes lumber dealers and lumber yards so specified in the directories.

Men's furnishings, retail

Includes men's furnishing stores, haberdashers and clothing dealers having important men's furnishing departments. Does not include men's furnishing departments of department stores except where separately operated and so listed.

Men's furnishings, wholesale

Covers only those firms which wholesale men's furnishings in a general way. City counts only are shown for men's furnishings wholesale. No state counts are given.

Sporting goods, retail

Includes concerns which deal exclusively in sporting goods, and also those stores having sporting goods departments, such as department stores and hardware stores. This treatment is at variance with that employed in most of the listings; but it seems to be necessary, since the sporting goods dealers in most towns combine this line with some other, instead of operating as exclusive sporting goods stores. Wherever special separate sporting goods stores exist, they have been included.

Sporting goods, wholesale

Includes the regular wholesalers of sporting goods.

CHAIN STORES IN THE GROCERY AND DRUG TRADES

One of the most baffling phases of market study is the chain store. The whole chain store idea in its present form is comparatively new and hence many difficulties arise in the compilation of figures. Definitions are vague and incomplete; it is difficult even to know when a group of branch stores really becomes a "chain"; the increase in the number of chain stores is incredibly rapid, and on that account figures which are only a few months old are almost useless; and finally, even after the most careful count, the resulting figures represent only the number of stores without regard to their size or the value of business they do.

Notwithstanding all these difficulties, it has seemed worth while to try to ascertain figures for the number of chain stores in the principal cities as of January 1, 1926, or as near that date as possible. The results of such an effort we present on the following pages. It was impossible to obtain information for all cities having a population of more than 25,000. Where figures were not available, the city has been omitted from the lists.

These figures were from directory counts supplemented by directory dispatch in cities where the Polk company has year round offices. A questionnaire was also sent out by the Polk Company to a number of the larger chains, many of which responded with full information.

An officer of the company in transmitting these figures explains these points and then says:

"However, I do not believe that the figures are accurate as yet, but are the best we can do in the space of time we have been working on them.

"In publishing these figures, I would suggest that you mention the difficulty in getting accurate counts due to the newness of the chain store business, and that the figures given are accurate insofar as present information will enable such a compilation, but that the counts were short."

The directory figures thus collected we have checked for each city of 100,000 inhabitants or more by comparison with local check-lists or other compilations made by newspapers in those cities respectively. We want to take this occasion to record our appreciation of the prompt and thorough co-operation which these newspapers have given. We believe that the resulting figures offer the most accurate tabulation of the chain-store business in these two trades thus far made.

It is clear that in these two trades, (drugs and groceries) chain store outlets have ceased to be abnormal or irregular features of the business. At least 9% of all the stores in the drug business in the cities of 25,000 and over belong to chains and approximately 20% of the grocery stores in these cities are chain stores.

This, of course, gives us no accurate measure of the relative volume of business done by the chains as compared with the independent stores; but the inherent properties of chain store organization make it perfectly certain that these stores are at least doing as well as the average, and that there are among them few stores with a turnover as low as that of the lower grades of independent stores. It seems perfectly certain therefore that the percentage of the total volume done must be substantially higher than the two figures indicated. These figures do not cover joint-buying syndicates of privately owned stores, even though operating under a brand name.

A new phase in chain store development is the spread of this institution into smaller places. This aspect of the problem is not touched at all in this table since these figures do not cover any cities below 25,000.

APPENDIX A

Where the Urban and Rural Population Lives

ONLY about one-fourth of the people in the United States live in cities of over 100,000—nearly one half live in the country or in towns below 2,500.

The growth of our cities has been so rapid and impressive, their streets seem so full of people, that it is easy to get exaggerated ideas about the extent to which we have become city dwellers.

We all know that the population of rural districts and towns of under 2,500 represents nearly one-half of our total population. But beyond this point our ideas are rather hazy as to the composition of these two groups of town and country population. Most people would be surprised to learn that the population of places of 500 inhabitants and under, almost equals the population living in cities of 10,000 or over. The uniform dominance of the rural population in almost any combination of totals is due to one important figure—namely, the 44 million which represents people living in places of 500 inhabitants or less. These are the real country people and villagers.

These country people still greatly outnumber the dwellers in large cities. This fact should never be forgotten when considering the attitude of the nation as a whole on all sorts of public questions. If every person living in places of less than 5,000 were to vote solidly for any given measure they would carry it, by a majority equal to the population of New York City, against the combined vote of people living in all the places larger than that.

The first diagram, on page 358, shows the total population of the country grouped by cities according to size. At a glance it appears that the greatest single group is that dominating total already referred to, represented by country dwellers and those living in towns or villages of less than 500. The second group in size is that portion living in places of over 100,000.

Compared with either of these groups the various other groups of cities show respectively very small totals. The largest of these six groups, that for places of from 10,000 to 25,000, is only a little over one-seventh of the total for places under 500.

The second diagram, on page 359, gives the same data for the various groups of cities in cumulative form, one additional size group of cities being included in each of the successive bars.

The tables—four in number—give the same data in the form of figures.

APPENDIX A

AGGREGATE POPULATION OF CITY GROUPS ARRANGED ACCORDING TO SIZE

Population groups	Population
Less than 500	44,246,982

SMALL CITY POPULATION OF THE UNITED STATES, 1920,

BY CITY GROUPS ACCORDING TO SIZE

Places of from 10,000 to 100,000 population

Total population 105,710,620

No. of places		Above 10,000	Above 25,000	Above 50,000	Above 100,000		No. of places
68	Over 100,000	27,429,326	27,429,326	27,429,326	27,429,326	Over 100,000	68
76	50,000 to 100,000	5,265,747	5,265,747	5,265,747	27,429,326		
143	25,000 to 50,000	5,075,041	5,075,041	32,695,073			
459	10,000 to 25,000	6,942,742	37,770,114		78,281,294		
		44,712,856		73,015,547	5,265,747	50,000 to 100,000	76
			67,940,506	5,075,041	5,075,041	25,000 to 50,000	143
		60,997,764	6,942,742	6,942,742	6,942,742	10,000 to 25,000	459
14,946	Less than 10,000	60,997,764	60,997,764	60,997,764	60,997,764	Less than 10,000	14,946
		Below 10,000	Below 25,000	Below 50,000	Below 100,000		

Above this line are the figures indicated in column headings

Below this line are the figures indicated at foot of column

The diagonal line in each case should be taken as the base line. The figure just above the diagonal line is the total cumulative population of places larger than the figure at the head of the column.

The figure just below the diagonal line is the total cumulative population of places smaller than the figure at the foot of the column.

Reading across, the figures show the total population of the city groups indicated at the left and right.

APPENDIX A

RURAL AND SMALL TOWN POPULATION OF THE UNITED STATES, 1920,

BY CITY AND TOWN GROUPS ACCORDING TO SIZE

Rural territory and incorporated places up to 10,000 population

Total population 105,710,620

No. of Incorporated places		Above 500	Above 1,000	Above 2,500	Above 5,000	Above 10,000		
746	Over 10,000	44,712,856	44,712,856	44,712,856	44,712,856	44,712,856	Over 10,000	746
721	5,000 to 10,000	4,997,794	4,997,794	4,997,794	4,997,794	44,712,856		
1320	2,500 to 5,000	4,593,953	4,593,953	4,593,953	49,710,650			
3028	1,000 to 2,500	4,711,409	4,711,409	54,304,603		60,997,764		
3450	500 to 1,000	2,447,626	59,016,012		55,999,970	4,997,794	5,000 to 10,000	
		61,463,638		51,406,017	4,593,953	4,593,953	2,500 to 5,000	
			46,694,608	4,711,409	4,711,409	4,711,409	1,000 to 2,500	
		44,246,982	2,447,626	2,447,626	2,447,626	2,447,626	500 to 1,000	
6427*	Less than 500	44,246,982	44,246,982	44,246,982	44,246,982	44,246,982	Less than 500	6427
		Below 500	Below 1,000	Below 2,500	Below 5,000	Below 10,000		

Above this line are the figures indicated in column headings
Below this line are the figures indicated at foot of column

* Includes 48 incorporated places for which no population can be given. Of the total here given the population in 6,379 remaining places of less than 500 each was 1,810,206. The population of "other rural territory" was 42,436,776, making the total as given here.

The diagonal line in each case should be taken as the base line. The figure just above the diagonal line is the total cumulative population of places larger than the figure at the head of the column.

The figure just below the diagonal line is the total cumulative population of places smaller than the figure at the foot of the column.

Reading across, the figures show the total population of the city groups indicated at the left and right.

Automobile passenger cars, registered, 1924	74.00	18.73	7.27	100.00

*Group I—19 states, each of which reported more than 1% of United States total personal taxable net income, 1922

†Group II—15 states, each of which reported from 0.5% to 1% of United States total personal taxable net income, 1922

‡Group III—15 states, each of which reported less than 0.5% of United States total personal taxable net income, 1922

APPENDIX C

SUGGESTIONS AS TO SOURCES OF BASIC DATA FOR USE IN MARKET ANALYSIS WORK

ABSTRACT OF THE FOURTEENTH CENSUS OF THE UNITED STATES 1920

PART I. NUMBER AND DISTRIBUTION OF INHABITANTS

United States—Divisions and States—Counties—Principal Cities—Urban and Rural —Cities and Their Suburbs

PART II. COMPOSITION AND CHARACTERISTICS OF THE POPULATION

Color or race, nativity, and parentage—Sex distribution—Age distribution—Marital condition—State of birth of the native population—Country of birth of the foreign-born population—Year of immigration of the foreign-born population—Citizenship of the foreign-born population—Country of origin of the foreign-white stock—Mother tongue of the foreign-white stock—School attendance—Illiteracy—Inability to speak English—Dwellings and families—Ownership of homes

FOURTEENTH CENSUS OF THE UNITED STATES 1920

Vol. I Population—Number and distribution
Vol. II Population—General reports and analytical tables
Vol. III Population—Composition and characteristics by states
Vol. IV Population—Occupations
Vol. V Agriculture—General reports and analytical tables
Vol. VI Agriculture—Reports for states—Statistics for counties

Census Monographs
Vol. IV. Farm tenancy in the United States 1920

U. S. Department of Commerce—Bureau of the Census
Number of farms by states and counties 1925, 1920, 1910, 1900

C. LUTHER FRY (INSTITUTE OF SOCIAL AND RELIGIOUS RESEARCH)

A Census Analysis of American Villages

CROWELL PUBLISHING COMPANY

NATIONAL MARKETS AND NATIONAL ADVERTISING (1925)
NATIONAL MARKET VALUES BY COUNTIES

(a) Purchasing power as indicated by: Value added by manufacture—Mine and fishing products—Crops, live stock and total value of products

(b) Standards of living as indicated by: Number of families—Number of income tax returns—Tax returns per 100 families—Number of passenger cars—Passenger cars per 100 families

(c) Accessibility as shown by: Area in square miles—Number of retail outlets—Outlets per 100 square miles—Number of dwellings—Dwellings per 100 square miles

(d) Circulation of five Crowell publications

The groups of figures (a) (b) and (c) are worked out into index numbers for each

county in the United States, and these are grouped by states, making a useful basis for sales quotas

CURTIS PUBLISHING COMPANY

SALES QUOTAS BY COUNTIES AND BY CITIES OVER 10,000 (1925)

The counties of the country are grouped into three classes according to density of circulation of Curtis publications and for these counties and by states the following figures are shown:

Native white farmers—Value of crops and live stock—Value added by manufacture —Total production value—Number of manufacturing establishments—Number of wage earners—Passenger cars other than Fords—Fords—Trucks other than Fords—Domestic lighting customers—Number of banks—Total deposits—Department stores, $50,000 up—Grocers, $2,000 up—Druggists, $2,000 up—Hardware, $3,000 up—Garages—Total population native white families—Total incomes—Incomes over $5,000. There is also a table showing the percentage of each state in the United States for 27 items in addition to circulation of three Curtis publications. These 27 items include: Value of farm property—Number of dwellings—Homes free from mortgage—Telephones—Life insurance—Road mileage—Hard-surfaced roads— Occupations of the gainfully employed (9 groups)—and retail and wholesale outlets (11 groups)

EDITOR AND PUBLISHER COMPANY

EDITOR AND PUBLISHER SPACE BUYERS GUIDE (1924)

A list of the chief towns in each state showing population, trading area and number of schools, churches, banks, and various lines of wholesale and retail houses and chief industries

THE FARM JOURNAL

COUNTY INDEX OF THE FARM MARKET (1925)

A set of index numbers for counties—Number of farms—Farms operated by white farmers—and Circulation of Farm Journal

NATIONAL BUREAU OF ECONOMIC RESEARCH

Income in the United States—Its Sources and Distribution—1919, 1920 and 1921—A study of income by states

THE 100,000 GROUP OF AMERICAN CITIES

A Study of 81 Principal American Markets—a tabulation showing for 81 cities and their surrounding territory such items as:

Population—Number of families—Number of dwellings—Male buyers (15 years of age and over)—Female buyers (15 years of age and over)—Automobiles—Newspaper circulations—and Number of wholesale and retail houses in 25 lines of trade

WOMAN'S WORLD MAGAZINE COMPANY, INCORPORATED

WOMAN'S WORLD COUNTY HANDBOOK OF NATIONAL DISTRIBUTION (1923)

State maps and lists of counties showing: Population—Circulation of Woman's World —and Number of 10 principal lines of retailers by counties and by towns down to 500 population
